

Save Wiring Time and Add More Points of Protection with V-Plex Polling Loop Technology

By utilizing two wires instead of four, Honeywell's state-of-the-art V-Plex polling loop technology offers significant advantages over homerun wiring or the conventional four-wire multiplex—providing economical expansion of peripheral devices and point ID to central monitoring stations. It provides fast response time, helps prevent costly, false alarm-driven service calls and lets you add more points of protection any time during or after commercial installations—helping you create scalable solutions that grow with the changing needs of your customers' businesses. It's a great way to add value to each and every sale.
